# Bost-Kleen™ Washdown Treatment

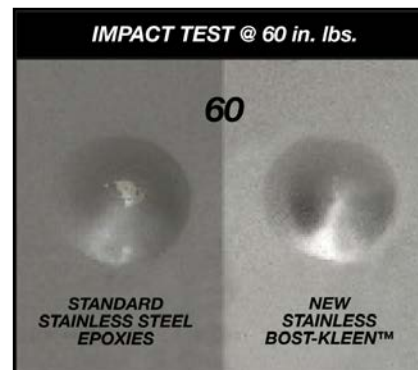

For Aggressive Washdown  
Environments

**Introducing an all NEW world-class washdown treatment for all families of speed reducers.**

Together with a team of chemists, Boston Gear has developed a washdown duty treatment that can withstand both high pressure and caustic washdown environments, all without chipping, flaking or rusting.

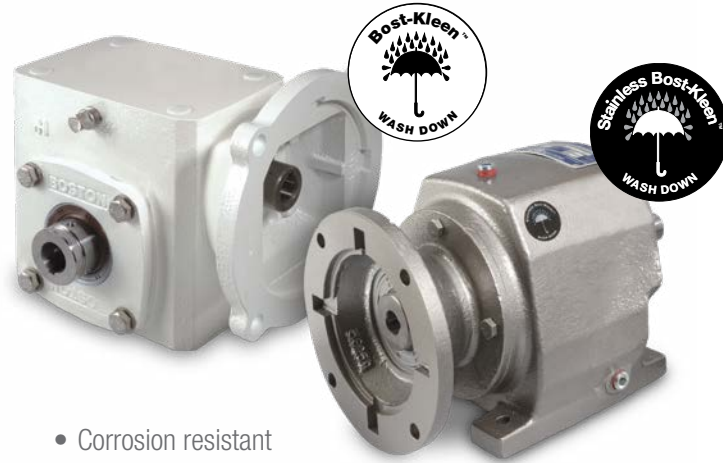

The secret to the all new Bost-Kleen™ system lies with the specially designed epoxies and curing agents as well as the process used to apply them. Utilizing Bisphenol-F type epoxy, a much higher level of corrosion resistance can be obtained due to the intensity of the chemical reactions and the resulting strength of the cross links with the curing agents.

*Independent laboratory tests have confirmed that the new Boston Gear Bost-Kleen™ washdown treatment system outperforms competitive coatings.*

## Bost-Kleen™ Treatment (White and Stainless)

- Corrosion resistant
- Stainless steel output shafts
- All external hardware made of stainless steel
- Durable, non-toxic epoxy paint
- Washable and scrubbable
- Smooth surface to resist contaminants and bacteria build-up
- USDA approved for use in food processing and handling applications where incidental food contact may occur

### Available Options on BK and SBK

- Pre-lubricated from the factory
- PosiVent® lubed-for-life system
- Pre-mounted washdown duty motors

### BISSC® Certified

BISSC — The Baking Industry Sanitation Standards Committee

- Includes all the features of the standard Bost-Kleen™
- Available in BK or SBK
- Single reduction 700 Series
- NEMA quill or basic styles
- Cast iron horizontal base is optional
- Double lipped oil seals
- Plated pressure relief valve
- Boston Gear's proven quality and limited lifetime warranty
